In the sequence presented here a TATA box is located at positions 492-499 and potential poly-A signals at 1534-1539 and 1591-1596. Four P-boxes (containing many proline codons) are found at 758-793, 794-829, 830-868, and 869-904. The P-box presumably arose in the ancestral alpha/beta-qliadin gene and was multiplied prior to the extensive multiplication of the whole gene. Every P-box is slightly different from every other. Two polyglutemine stretches reside at 941-994 and 1202-1224. In wheat DNA 'cg' and 'cng' sequences are over 80% methylated to m5c. An alternating purine pyrimidine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Summer-Smith, M., Rafalski, J.A., Sugiyama, T., Stoll, M. and Soell, D. On Apr 16, 2002 this sequence version replaced gi:17933036.

Genes were predicted from the integrated results of the following: CENSCANI.0, BLASTNX.0, BLASTNX.0 as well as SplicePredictor (October 1998 version). The genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RRP. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP2.0, ESTS represent the identified cDNA sequences using BLASTN 2.0 with the corresponding DDBJ accession no. and RGP clone in.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein name to indicate the homology (covering almost the entire length of partial sequence) is classified as an is classified as a 'hypothetical' protein.

The orientation of the sequence is from SP6 to 77 of the PAC clone. This sequence of P04466605 clone has an overlap with P046608 clone. Thurst.applia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (DDBJ:AP003240) clone at the position 1 to 17,096 of 5' end and with P0005410 (DDBJ:AP004127) at the position 98,039 to 149,145 of 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at

NOTE: This is a "working draft" sequence. It currently
consists of 59 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
                                                                                                                                                                                                                          Direct Submission

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chemistry: Dye-primer ET: 08 of reads

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 21, Application US/09724864
Patent No. 6380362
GENERAL INFORMATION:
APPLICANT: Watson, James D
APPLICANT: Murison, James G
TITLE OF INVENTION: Polynucleotides, polypeptides expressed
TITLE OF INVENTION: by the polynucleotides and methods for their use.
FILE REFERENCE: 11000.1050ul
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LysGlnThrCysGlnThrGlnLeuThrGlyH1sGlnTyrTrpLysIleAlaAlaMetLys
